Risk Assessment Solution

Geocentric Threat Hazard Identification Risk Assessment (gTHIRA™) is a browser based internet software solution. gTHIRA™ incorporates a dashboard that searches and consolidates information derived from open sources of traditional media, domain awareness (DAVA), terrain intelligence and social media.

- Follows the NIST Cybersecurity Framework
- Dynamically created reports
- 113,000+ Terrorism Database
- Collects, analyzes and disseminates
- Electronic map becomes your personal dashboard
- Facilities Icons are color coded
- Systems sends DIB's (Daily Intelligence Briefings) via email
- As new threats are discovered, risk level changes
- Weather alerts and warnings are sent out as SitReps (Situation Reports)
- Easy to decipher risk ratings

Risk ratings are color coded and numbered

Committed to Excellence in Defense of Critical Infrastructures

gTHIRA Systems is a company conceived right out of the pages of the intelligence community. We provide Non-governmental organizations (NGO), humanitarian, private enterprises and large government contractors in data gathering to gain intelligence in identifying threats and hazards; local to their business or Area of Interest (AOI). We plan, manage, and execute security intelligence operations for private businesses, security firms and consultants.

Our diverse workforce is skilled in police led intelligence, terrorism, asymmetrical threats, crime prevention, geographical information systems (GIS), cybersecurity, National Infrastructure Protection and Anti-Terrorism Force Protection (AT/FP).
